Pilla Performance Eyewear Outlaw

Pilla Performance Eyewear (formerly HiDefSpex) recently announced the introduction of two new models into its Pro Line, the Outlaw and Tomcat. The first thing that will get your attention is the Carbon Fiber Fork Temple design. The temples form "Y" shapes, or forks, that go around the ears to mold to the head perfectly. Both models are made from high-performance carbon fiber and weigh in at less than 1 oz., making them the lightest additions in the Pro Line. The Outlaw features a single shield design while the Tomcat sports a more traditional dual-lens look. Both frames are designed to be used with Pilla's new HDX Anti-Reflective technology interchangeable lenses, a color-balancing and enhancing-lens system that helps manage light and cut down glare and other visual noise.

Lens changes are easy with Pilla's Snap Tec lens anchor system, and Rx lenses are also available for prescription wearers. With the HDX Anti-Reflective Max Orange and High Contrast, shooters can get a significant boost in seeing orange targets or not higher levels of contrast, respectively. For daily eye protection, Pilla's i-Reflective Varia is a lens that regulates passing through them, much like the photochromic lenses that were so popular during the 1970s. If you won't be able to get the older HiDefined popularity among a lot of top gunners, the Puma model (available with an Rx insert) is among clays shooters, as are the Puma

The increased benefits of shooting glasses come in many different guises. For the Las Vegas-based Pilla Performance Eyewear, "to protect and to harm." The latter is a well-known phrase from the movie *Top Gun*. But a well-aimed shot with the right choice of lens, the right target and the right eye protection, can be a deadly shot. The idea of eye protection is not new. It's been around for as long as there's been shooting. The idea of eye protection is not new. It's been around for as long as there's been shooting. The idea of eye protection is not new. It's been around for as long as there's been shooting.

When you invest in your shooting glasses, it's important to look for a complete eye examination to make sure your eyes are healthy and to replace or repair any damaged eyes. It's also important to look for a complete eye examination to make sure your eyes are healthy and to replace or repair any damaged eyes. It's also important to look for a complete eye examination to make sure your eyes are healthy and to replace or repair any damaged eyes.

the safety, the starting eye safety standards in which the standards are. It's not a mere problem but rather a problem of protection.
